

SPACESHIP PROJECT

Michalina Hulak

INTRODUCTION

The Spaceship Titanic was an interstellar passenger liner launched a month ago. With almost 13,000 passengers on board, the vessel set out on its maiden voyage transporting emigrants from our solar system to three newly habitable exoplanets orbiting nearby stars.

While rounding Alpha Centauri en route to its first destination—the torrid 55 Cancri E—the unwary Spaceship Titanic collided with a spacetime anomaly hidden within a dust cloud. Sadly, it met a similar fate as its namesake from 1000 years before. Though the ship stayed intact, almost half of the passengers were transported to an alternate dimension!

The introduction and dataset comes from [kaggle.com](https://www.kaggle.com)

GOAL

The aim of the project is to **predict which passengers were transported** by the anomaly using records recovered from the spaceship's damaged computer system.

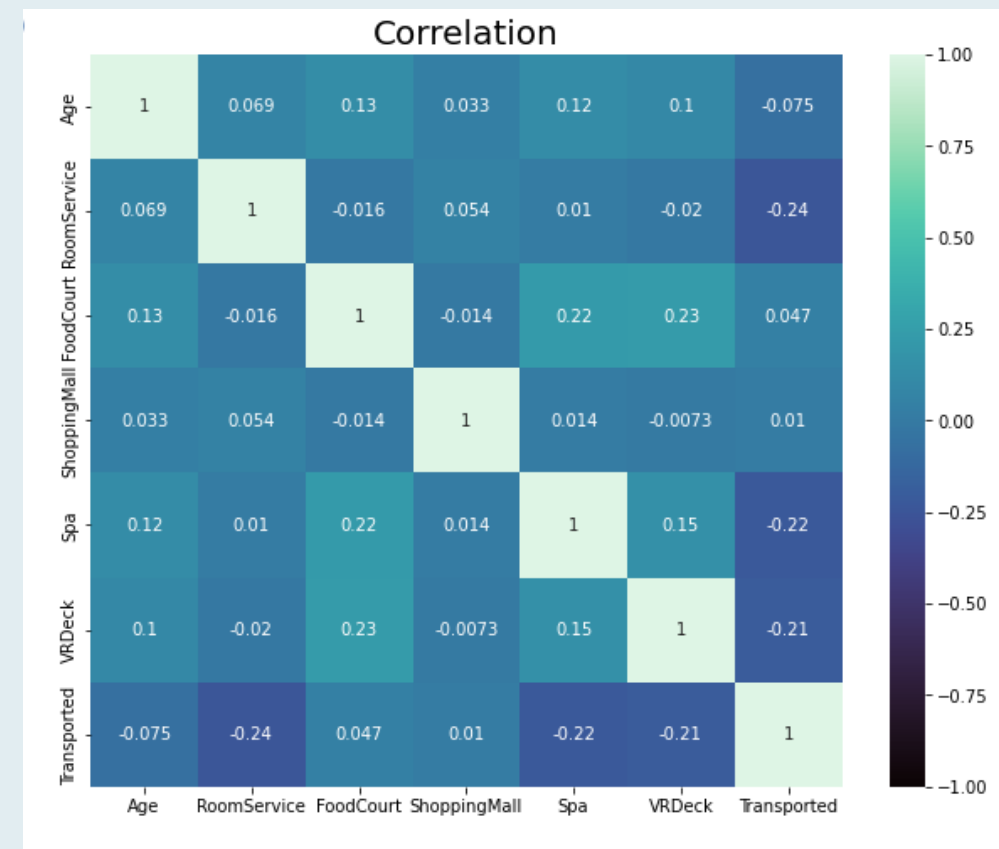

The prediction is based on the data contained in the train.csv file.

Research phase of this project

1. Pandas profiler to generate report in html format
2. Visualizations
3. Filling in missing values
4. Replacing categorical values with One-Hot-Encoding and Ordinal Encoding
5. Using 4 models: Random Forest, XGBClassifier, LGBMClassifier, CatBoost, with default parameters
6. Finding the best hyperparameters using Optuna
7. Choosing the best model and prediction for the test_dataset

RESULTS

Random Forest

Best hyperparameters:

'n_estimators': 28,
'max_depth': 17,
'min_samples_split': 8,
'min_samples_leaf': 7,
'max_features': 'sqrt'

Metrics:

Accuracy: 0.79
Precision: 0.79
Recall: 0.79
F-Score: 0.79
Total: 1739
Misabeled: 364

XGBoost

Best hyperparameters:

'max_depth': 5,
'eta': 0.07231591481728795,
'gamma': 1.058351741651363e-07,
'grow_policy': 'depthwise',
'subsample': 1.0,
'colsample_bytree':
0.3000000000000000004,
'min_child_weight': 26,
'n_estimators': 219

Metrics:

Accuracy: 0.8
Precision: 0.8
Recall: 0.8
F-Score: 0.8
Total: 1739
Misabeled: 351

LightGBM

Best hyperparameters:

'lambda_l1': 3.417199593159779,
'lambda_l2': 0.017340606461167682,
'num_leaves': 36,
'max_depth': 6,
'learning_rate': 0.016682548296829414,
'feature_fraction': 0.5126266483695845,
'bagging_fraction': 0.4866852303282229,
'bagging_freq': 5,
'min_child_samples': 95,
'n_estimators': 618

Metrics:

Accuracy: 0.79
Precision: 0.8
Recall: 0.79
F-Score: 0.79
Total: 1739
Misabeled: 358

CatBoost

Best hyperparameters:

'iterations': 610,
'learning_rate': 0.02935312297292448,
'depth': 10,
'l2_leaf_reg': 0.4095699607600287,
'bagging_temperature':
0.042090158760203486,
'random_strength': 0.893371179302546

Metrics:

Accuracy: 0.5
Precision: 0.25
Recall: 0.5
F-Score: 0.34
Total: 1739
Misabeled: 861

RESULTS

The XGBoost logo is centered within a dark rectangular area that has a subtle, grainy texture. The text "XGBoost" is rendered in a clean, white, sans-serif typeface. The background of the entire slide is a solid dark blue, and the logo itself is a lighter shade of blue with a slight gradient.

XGBoost

The best metrics were achieved by the XGBoost model after selecting hyperparameters using Optuna. This model was mislabeled 351 and was the lowest score ever achieved.
